

Brightspace for the Ontario VLE

A K-12 learning management system (LMS) designed to help reach **every** learner in Ontario

Brightspace by D2L is an integral part of Ontario's Virtual Learning Environment (VLE). The VLE is made up of Brightspace with extensive Ministry content to help Ontario educators do what they do best—teach!

Did You Know?

That all K-12 public school teachers in Ontario have free access to Brightspace as part of the provincial VLE. To get the VLE for your classroom, reach out to your Technology Enabled Learning and Teaching (TELT) contact or email K12Ont@D2L.com.

Reimagine blended learning

The VLE helps you give each student a more personalized learning experience—but now, you can do it with fewer headaches and in less time. It's easy to use and it works on any mobile device, for each grade level.

Saving time for teachers

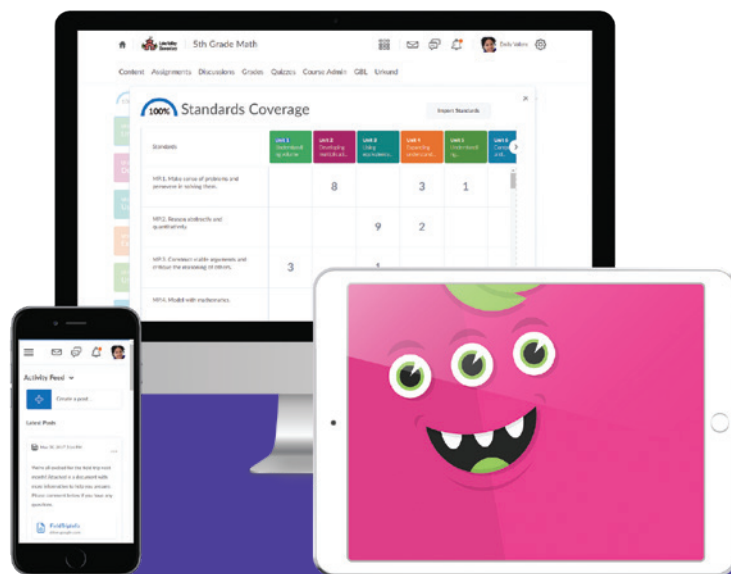

From building lessons to grading quizzes, teaching is no easy task—but the VLE makes the daily tasks easier. Offering robust Ministry content with single sign-on to all your favorite tools and a streamlined social interface, you can create a better experience without spending extra hours on tedious work.

More choices for schools

Students grow and change as they progress: your LMS needs to help you adapt, too. The VLE works across all elementary, middle, and high school grades, supporting schools to achieve their goals. You can give students flexibility with self-pacing and give teachers what they need to support every learning style.

All in one spot

The right LMS can help you take classes to the next level without having to manage more than one system. The VLE integrates seamlessly with your existing tools. And because it's a single platform that's easy to adopt, teachers and students will need less time training to use it.

Go beyond the classroom

- Quickly create lessons aligned to standards using materials from publishers, open educational resources, or the Google Drive™ online storage service
- Engage parents and guardians by sharing the class activity feed and a student's portfolio directly with them
- Ensure that every student has the same access to learning and that they can easily switch between mobile devices
- Track student progress with simple dashboards and provide real-time feedback with scheduled personal messages and discussions
- Snap your SIS into place with the VLE: more productivity for teachers and fewer headaches for admins
